

Snakes Alive!

Don't Look Now

The rattling from behind the cactus could be either a venomous or non-venomous snake. Best not to find out. Going with the dogs to the mountains for a hike, or even just to the local canyon (Switzer for me), used to be a lot of fun. With the spring come the snakes however. Have you encountered a lot of snakes this season? Write in about what you do with your dogs to keep active when the snakes come out.

"One face you never want to see."
